ABOUT BRAIN BAGS:

Brain Bags were started by the Studer Community Institute in Pensicola, Florida as a way for parents to encourage early brain development and literacy skills in their babies.

90-95% of a child's brain growth happens by age 5, before they even start kindergarten! In order to maximize your child's brain development and readiness for school, it is important to start early.

This Brain Bag includes tools and information for growing your baby's brain.

BASICS OF BUILDING BRAINS

Follow the QR code below to learn the basics of building your baby's brain
